

Print a paper as a booklet

Want to print a paper like this? Here are steps to print a paper as a booklet

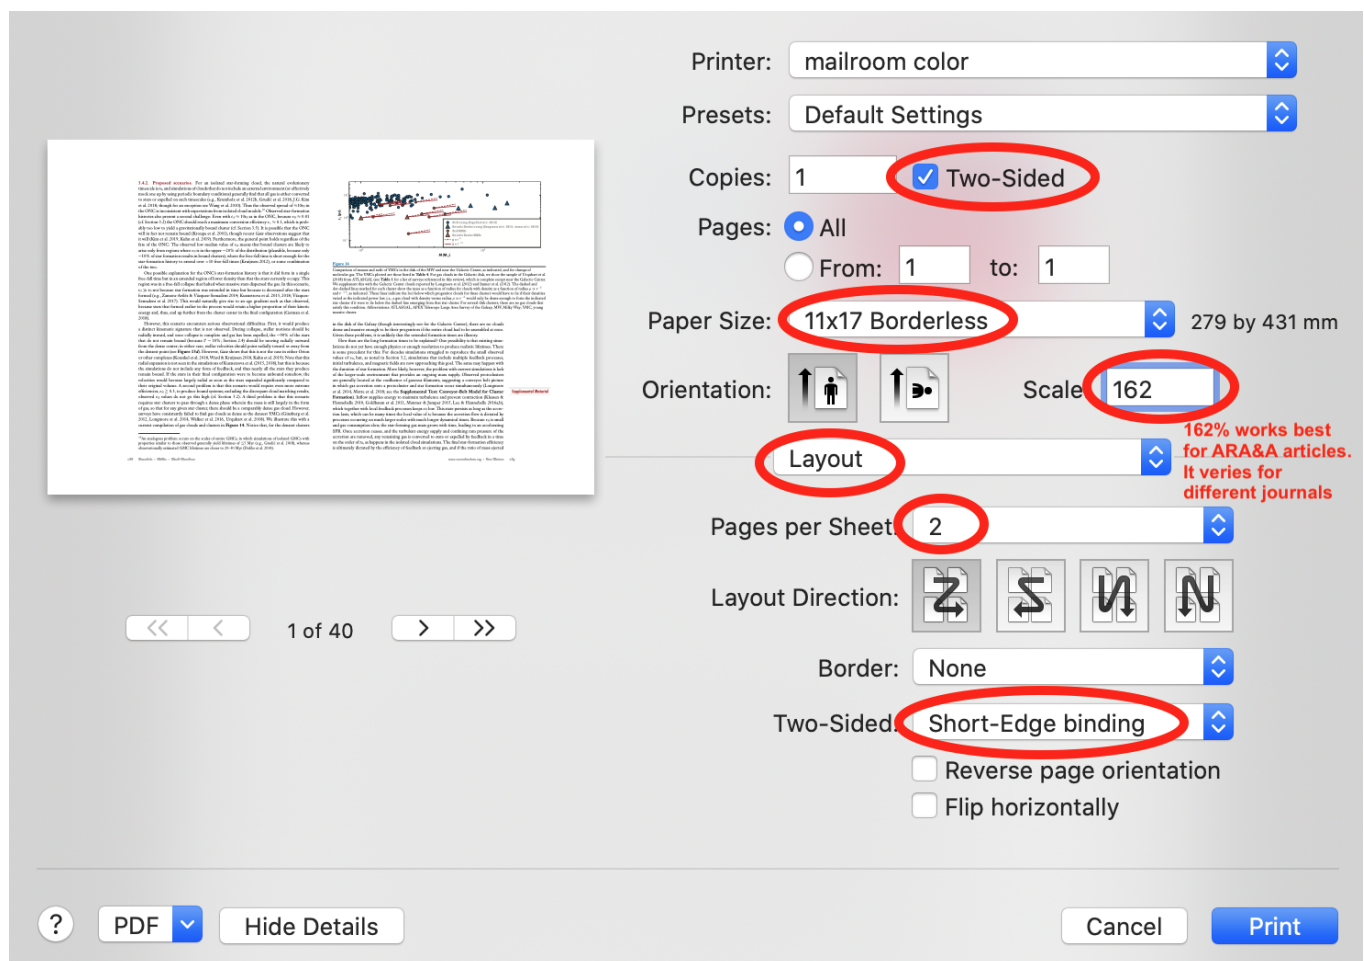

Rearrange the PDF

In order to make your PDF read like a book, you need to rearrange the order of the pages before you print it. I wrote a python script to do this. Get the code from this github repository:

<https://github.com/chongchonghe/booklet-creator.git> and following the guide there.

Print the PDF in Tabloid style

Print the PDF in Tabloid style (11 by 17 in, or 279 by 432 mm). A printer setup on macOS looks like this:

Fold and staple it

In order to put staples in the middle of the booklet, you may need a stapler longer than usual. I have left a long stapler of mine on the desk in this office for everyone to use. Set the scale at 8.5 in.
